CLINICAL BIOCHEMISTRY						
Test Name	Results	Units	Biological Reference Interval			
Protein - Random Urine	6.5	mg/dL	1-14			
Creatinine - Random Urine	57.55	mg/dL	24-392			
Protein/Creatinine Ratio	0.11		< 0.20			

## Interpretation:

The urine protein test measures the amount of protein being excreted in the urine.Proteinuria is frequently seen in chronic diseases, such as diabetes and hypertension, with increasing amounts of protein in the urine reflecting increasing kidney damage. With early kidney damage, the affected person is often asymptomatic. As damage progresses, or if protein loss is severe, the person may develop symptoms such as edema, shortness of breath, nausea, and fatigue. Excess protein overproduction, as seen with multiple myeloma, lymphoma, and amyloidosis, can also lead to proteinuria. Creatinine, a byproduct of muscle metabolism, is normally released into the urine at a constant rate.
