LABORATORY TEST REPORT

-			
Name	: Mrs. SUNITHA REDDY		
Sample ID	: A1840827		
Age/Gender	: 50 Years/Female	Reg. No	: 0312502150003
Referred by	: Dr. SELF	SPP Code	: SPL-CV-172
Referring Customer	: V CARE MEDICAL DIAGNOSTICS	Collected On	: 15-Feb-2025 10:24 AM
Primary Sample	: Whole Blood	Received On	: 15-Feb-2025 01:16 PM
Sample Tested In	: Serum	Reported On	: 15-Feb-2025 03:08 PM
Client Address	: Kimtee colony ,Gokul Nagar,Tarnaka	Report Status	: Final Report

CLINICAL BIOCHEMISTRY			
Test Name	Results	Units	Biological Reference Interval
C-Reactive protein-(CRP)	<u>6.6</u>	mg/L	Upto:6.0

Interpretation:

ITDOSE INFOSYSTEMS PVT. LTD.

C-reactive protein (CRP) is produced by the liver. The level of CRP rises when there is inflammation throughout the body. It is one of a group of proteins called acute phase reactants that go up in response to inflammation. The levels of acute phase reactants increase in response to certain inflammatory proteins called cytokines. These proteins are produced by white blood cells during inflammation.

A positive test means you have inflammation in the body. This may be due to a variety of conditions, including:

- Connective tissue disease
- Heart attack
- Infection
- Inflammatory bowel disease (IBD)
- Lupus
- Pneumonia
- Rheumatoid arthritis

CLINICAL BIOCHEMISTRY			
Test Name	Results	Units	Biological Reference Interval
Total IgE (Method: CLIA)	7.0	IU/mL	Upto 378

Interpretation:

ITDOSE INFOSYSTEMS PVT. LTD.

- Allergies are a common and chronic condition that involves the body's immune system. Normally, your immune system works to fight off viruses, bacteria, and other infectious agents. When you have an allergy, your immune system treats a harmless substance, like dust or pollen, as a threat. To fight this perceived threat, your immune system makes antibodies called immunoglobulin E (IgE).
- Substances that cause an allergic reaction are called allergens. Besides dust and pollen, other common allergens include animal dander, foods, including nuts and shellfish, and certain medicines, such as penicillin.
- Allergy symptoms can range from sneezing and a stuffy nose to a life-threatening complication called anaphylactic shock. Allergy blood tests measure the amount of IgE antibodies in the blood. A small amount of IgE antibodies is normal. A larger amount of IgE may mean you have an allergy.
