### LABORATORY TEST REPORT

Name : Mrs. ANUSHA Sample ID : B2675530

: 32 Years/Female Reg. No : 0312504010075

Referred by : Dr. DURGA PRASAD T SPP Code : SPL-CV-172

Referring Customer : V CARE MEDICAL DIAGNOSTICS Collected On : 01-Apr-2025 08:33 PM
Primary Sample : Whole Blood Received On : 01-Apr-2025 10:06 PM
Sample Tested In : Serum Reported On : 02-Apr-2025 12:14 AM

Client Address : Kimtee colony ,Gokul Nagar,Tarnaka Report Status : Final Report

### **CLINICAL BIOCHEMISTRY**

Test Name	Results	Units	Biological Reference Interval

C-Reactive protein-(CRP) <u>8.3</u> mg/L Upto:6.0

#### Interpretation

Age/Gender

C-reactive protein (CRP) is produced by the liver. The level of CRP rises when there is inflammation throughout the body. It is one of a group of proteins called acute phase reactants that go up in response to inflammation. The levels of acute phase reactants increase in response to certain inflammatory proteins called cytokines. These proteins are produced by white blood cells during inflammation.

A positive test means you have inflammation in the body. This may be due to a variety of conditions, including:

- Connective tissue disease
- Heart attack
- Infection
- Inflammatory bowel disease (IBD)
- Lupus
- Pneumonia
- Rheumatoid arthritis

CLINICAL BIOCHEMISTRY				
Test Name	Results	Units	Biological Reference Interval	
Liver Function Test (LFT)				
Bilirubin(Total) (Method: Diazo)	0.3	mg/dL	0.3-1.2	
Bilirubin (Direct)	0.1	mg/dL	0.0 - 0.3	
Bilirubin (Indirect) (Method: Calculated)	0.2	mg/dL	0.2-1.0	
Aspartate Aminotransferase (AST/SGOT)	19	U/L	15-37	
Alanine Aminotransferase (ALT/SGPT)      Method: IFCC with out (P-5-P))	13	U/L	0-55	
Alkaline Phosphatase(ALP)     (Method: Kinetic PNPP-AMP)	117	U/L	30-120	
Gamma Glutamyl Transpeptidase (GGTP)	17	U/L	5-55	
Protein - Total	7.3	g/dL	6.4-8.2	
Albumin (Method: Bromocresol Green (BCG))	3.7	g/dL	3.4-5.0	
Globulin (Method: Calculated)	3.6	g/dL	2.0-4.2	
A:G Ratio     Method: Calculated)	1.03	Ratio	0.8-2.0	
SGOT/SGPT Ratio (Method: Calculated)	<u>1.46</u>	Ratio	<1.0	

Alanine Aminotransferase(ALT) is an enzyme found in liver and kidneys cells. ALT helps create energy for liver cells. Damaged liver cells release ALT into the bloodstream, which can elevate ALT levels in the blood.

Aspartate Aminotransferase (AST) is an enzyme in the liver and muscles that helps metabolizes amino acids. Similarly to ALT, elevated AST levels may be a sign of liver damage or liver disease.

Alkaline phosphate (ALP) is an enzyme present in the blood. ALP contributes to numerous vital bodily functions, such as supplying nutrients to the liver, promoting bone growth, and metabolizing fat in the intestines.

Gamma-glutamyl Transpeptidase (GGTP) is an enzyme that occurs primarily in the liver, but it is also present in the kidneys, pancreas, gallbladder, and spleen. Higher than normal concentrations of GGTP in the blood may indicate alcohol-related liver damage. Elevated GGTP levels can also increase the risk of developing certain types of cancer.

**Bilirubin** is a waste product that forms when the liver breaks down red blood cells. Bilirubin exits the body as bile in stool. High levels of bilirubin can cause jaundice - a condition in which the skin and whites of the eyes turn yellow- and may indicate liver damage.

**Albumin** is a protein that the liver produces. The liver releases albumin into the bloodstream, where it helps fight infections and transport vitamins, hormones, and enzymes throughout the body. Liver damage can cause abnormally low albumin levels.
